

What is claimed is:

1. A wireless telephone including:  
a display area and a keypad area,  
said keypad area including one button which is movable to display selected  
5 numbers, letters or functions and depressed to record the selected number, letter or  
function for dialing or transmission.
2. A wireless telephone as in claim 1 in which the one button is moved  
along and guided to number, letter or function locations by channels.
3. A wireless telephone as in claim 2 in which the channels include wells  
located at positions corresponding to a particular number, letter or function.
4. A wireless telephone as in claim 3 in which the number is recorded by  
15 depressing the plunger into the well corresponding to the selected number, letter or  
function.
5. A wireless telephone as in claim 1 in which the button is a joystick or  
trackball which is moved to select, and depressed to send, the selected number, letter  
20 or function.
6. A wireless telephone including:  
a display area,  
a one button control for selecting numbers, letters or symbols,  
25 means for displaying selected numbers, letters or symbols in the display area,  
means controlled by depression of said button for recording the displayed  
selected number, letter or symbol, and  
means for displaying all of the selected numbers, letters or symbols.
7. A wireless telephone as in claim 6 including channels and wells formed  
in a printed circuit board, said wells being located at number, letter or symbol  
locations, a plunger associated with said control button adapted to slide along the  
channels to a selected well location, and means associated with said plunger serving to
